

Information for Course Syllabus

Name of Course: Anatomy and Physiology Honors

Grade Level: 11-12

School: ORHS

Major Assignments: Brain, Eye, & Heart Dissections.

Multiple research projects & student created models will be produced throughout the course. Fetal pig or shark dissection specimen TBD.

Field Trips: None

How can parents access instructional materials? Canvas

Anatomy and Physiology Honors

2021-2022

Term 1

Intro to HAP and Anatomical Orientations	Core Idea: The human body is organized to accomplish life processes.
	HAP.LS1.1 Investigate the organization of the human body in relation to its ability to accomplish life functions and construct an explanation for the relationship between anatomy and physiology.
	HAP.LS1.2 Differentiate the major organ systems of the human body by their anatomy and physiology and engage in argument about defined boundaries due to their functional connectivity.
	HAP.LS1.3 Describe the organizational levels of the human body and observe patterns in cell types and tissue types across organ systems.
	HAP.LS1.4 Use a human model to differentiate the major body cavities and organs located within them. Describe the model using proper anatomical and directional terminology for body regions, planes, and cavities.
	HAP.LS1.5 Explain homeostasis and describe how it is accomplished through feedback mechanisms that utilize receptors and effectors.

Tissue & Integumentary System	Core Idea: The Integumentary system provides protection, temperature homeostasis, and sensation
	HAP.LS1.6 Describe the anatomical structures of the integumentary system and explain their role in the physiological processes of protection, temperature homeostasis, and sensation.

Anatomy and Physiology Honors

2021-2022

Term 1

Muscular System	Core Idea: Muscular systems provide movement and temperature homeostasis.
	HAP.LS1.11 Differentiate visceral, cardiac, and skeletal muscle tissues based on anatomical criteria and their physiological role in the movement of body parts and/or substances.
	HAP.LS1.12 Model the gross and microscopic anatomy of skeletal muscle and a muscle fiber and use the model to identify and explain the roles of subcellular structures that participate in the events of muscle fiber contraction and heat generation.
	HAP.LS1.13 Model the anatomical connections between the skeletal system and muscular system and explain how they generate movement through antagonistic muscle groups.

Skeletal System	Core Idea: The Skeletal system provides support, protection, movement, storage, and hematopoiesis.
	HAP.LS1.8 Identify major bones within the axial and appendicular divisions, describing their physiological roles in creating a body scaffold, internal organ protection, and anchor points for skeletal muscles participating in movement.
	HAP.LS1.9 Diagram microscopic bone structures, identifying regions that participate in hematopoiesis and storage of minerals and fat.
	HAP.LS1.10 Explain the processes of bone formation, growth, and repair.
	HAP.ETS2.1 Research system disorders to communicate information on the known facts about the disorders and identify technology that has been developed to diagnose and/or treat the disorders.

Anatomy and Physiology Honors 2021-2022

Term 1

Nervous System and Special Senses

Core Idea: The Nervous system, in response to stimuli, coordinates functions of other body systems to support life processes.

HAP.LS1.33 Anatomically distinguish between the central nervous system and the peripheral nervous system. Explain how their structures and locations are related to their physiological roles.

HAP.LS1.34 Model the cellular and subcellular structures of neurons and explain the molecular neurophysiology of membrane potentials and the conduction of information through synaptic transmission.

HAP.LS1.35 Identify and describe the types of sensory receptors found in the human body.

HAP.LS1.36 Compare and contrast the structures and functions of the somatic nervous system and the autonomic nervous system.

HAP.LS1.37 Model the major parts of the brain and spinal cord, relating each part to its source of sensory information and/or its primary target of regulation.

HAP.LS1.38 Explain the structures, functions, and limitations of the human sensory systems (senses): hearing, balance/proprioception, sight, touch, smell, and taste.

HAP.ETS2.1 Research system disorders to communicate information on the known facts about the disorders and identify technology that has been developed to diagnose and/or treat the disorders.

Anatomy and Physiology Honors

2021-2022

Term 2

Circulatory System and Respiratory System	<p>Core Idea: The Cardiovascular system provides transport of materials for homeostatic control and protection throughout the body.</p>
	<p>HAP.LS1.14 Describe, in terms of structure and function, the systemic and pulmonary paths of the cardiovascular system.</p>
	<p>HAP.LS1.15 Prepare and/or use a model of a human heart to explain systole and diastole and the heart's internal and external control mechanisms involved in producing the heartbeat.</p>
	<p>HAP.LS1.16 Explain blood pressure in terms of systole and diastole. Describe the factors affecting blood pressure and blood pressure's role in homeostasis.</p>
	<p>HAP.LS1.17 Examine the structure (molecular and cellular) of blood constituents and describe their function.</p>
	<p>HAP.LS1.18 Explain how the anatomy of the respiratory system functions to provide oxygen and carbon dioxide transport mechanisms between the lungs and the circulatory system, considering capillary structures, red blood cell structures, diffusion, and affinity.</p>
<p>HAP.LS1.19 Explain the relationship between the integumentary, muscular, and circulatory systems in temperature homeostasis.</p>	

Digestive System	<p>Core Idea: The Digestive system provides for absorption of raw materials that build and fuel the body's cells.</p>
	<p>HAP.LS1.24 Model the sequential organization of the alimentary canal and its accessory organs in order to describe the physiological role of each.</p>
	<p>HAP.LS1.25 Analyze gastrointestinal wall histology and explain the anatomical architecture that supports efficient absorption and transport of molecules into cardiovascular or lymphatic circulation.</p>
	<p>HAP.LS1.26 Investigate the actions of major digestive enzymes and hormones and identify their sources.</p>
	<p>HAP.LS1.27 Describe the role of the hepatic portal system in coupling the digestive and cardiovascular systems.</p>
	<p>HAP.ETS2.1 Research system disorders to communicate information on the known facts about the disorders and identify technology that has been developed to diagnose and/or treat the disorders.</p>

Anatomy and Physiology Honors

2021-2022

Term 2

Urinary System	Core Idea: The Urinary system provides for waste excretion, osmotic homeostasis, electrolyte homeostasis, and pH homeostasis.
	HAP.LS1.28 Model the sequential organization of the male and female urinary tracts in order to describe the physiological role of blood filtration and waste excretion from the body.
	HAP.LS1.29 Identify the parts of a nephron and describe how they assist in homeostatic mechanisms through urine formation.

Lymphatic System	Core Idea: The Immune and Lymphatic systems provide protection and lipid transport.
	HAP.LS1.20 Describe the relationship between the structure and function of the lymphatic system.
	HAP.LS1.21 Differentiate between innate and adaptive immunity, identifying immune cells that play a role in each.
	HAP.LS1.22 Analyze ABO and Rh blood groups as a basis for blood transfusion and infant incompatibility reactions.
	HAP.LS1.23 Diagram the progression of lipid transport from the digestive system, through the lymphatic system, and into the cardiovascular circulation.

Endocrine System	Core Idea: The Endocrine system, through hormones, regulates the functions of organs to support life processes.
	HAP.LS1.30 Using a model, name and locate the major endocrine glands and identify additional organ tissues in the human body that produce hormones. Describe the hormones produced and their physiological effects on other body targets.
	HAP.LS1.31 Describe the relationship between receptors and ligands and differentiate between steroid and nonsteroid hormones as ligands.
	HAP.LS1.32 Explain, using examples, the mechanism of negative feedback in hormonal production and control.

Anatomy and Physiology Honors 2021-2022

Term 2

Reproductive System

Core Idea: The Reproductive systems ensure the continuity of species through gametogenesis, fertilization, and embryogenesis.

HAP.LS1.39 Identify and describe the organs of the human male and female reproductive systems that provide the physiological functions of gametogenesis, fertilization, and embryogenesis.

HAP.LS1.40 Examine the microscopic structures of the human egg and sperm and explain how their structures relate to their functions.

HAP.LS1.41 Based on the secretion of hormones, identify the endocrine tissues of the reproductive system and describe their roles in regulation of secondary sex characteristics, the female menstrual cycle, pregnancy, fetal development, and parturition.

HAP.LS1.42 Trace the major events of human development from fertilization to birth, with a focus on the development of organs and functional organ systems.

HAP.LS1.7 Diagram a cross-sectional image of skin layers identifying the microscopic components and describe the life cycle of cells that maintain these layers.

HAP.ETS2.1 Research system disorders to communicate information on the known facts about the disorders and identify technology that has been developed to diagnose and/or treat the disorders.

Review and Final Exam
